

Ziptrak®

Indoor and Outdoor Roller Blinds

Ziptrak® screens easily maximise your living options by connecting indoor and outdoor environments to make one harmonious room. They also provide seclusion and protection from the elements, while controlling airflow, light and temperature. As well as being robust and aesthetically pleasing, Ziptrak® has a patented track-guided system that ensures screens easily glide up or down and stop in the position you require.

Wireless Remotes

With discreet, high-end technology, operation of our products is safe, reliable and ideal for hard-to-reach windows, or people who may find manual operation difficult. Multiple awnings or screens can be operated individually or in unison via a remote control. Please refer to section on wireless remotes.
